Sketching

AWARDS

University Of Colorado Boulder |
Program of Environmental
Design's Honor List–
Recognizing scholastic
achievement above a 3.50 average

Currently pursuing a Bachelor's degree in Environmental Design which is a four-year pre-professional degree which prepares students for careers in the design fields of architecture, landscape architecture, urban design and planning, as well as preparing students to go on to master's programs. The program has a long and distinguished history, having been offered on the University of Colorado's Flagship Campus since 1970. Undergraduate students benefit from studying on a traditional, residential campus and have access to design professionals all along the front-range urban corridor. I am also working on a certificate in Design Technologies from the Engineering School at CU.

Personal Statement —

Over the course of the 3 years that I have been in the Environmental Design program at CU, I have been challenged to the point I never thought imaginable, shaped to think in an unexplainably complex way, taught to produce designs that will undoubtedly change the outcome our future, and inspired to become a great proponent in the evolution of our built environment. I would also say that in the time I have spent in this program I have developed my own "design identity." I have found myself to frequently push boundaries and challenge guidelines, for my creative mind produces ideas that are nontraditional and innovative.
